

Forensic Report

Case number JZ 9421 Orlando

- The window on the right-hand side in the backyard of the house was shattered and pieces of glass were identified inside the residence.
- The windowsill was forcefully bent out of place, likely causing the glass to shatter and indicating a high likelihood of unlawful entry.
- Portions of the shattered glass were carefully removed and placed on the ground outside, again adding to the probability that the window was intentionally broken in order to gain ingress to the residence.
- The glass fragments that were left outside of the residence were taken into the mobile CSI unit and meticulously dusted for fingerprints. At least two sets of prints were found, one partial and the other complete enough for a positive identification of one suspect with 98% probability. The analysis of the ridges and whorls of the fingerprint allows for this team to state, with almost complete certainty, that the alleged perpetrator did in fact touch the glass shard with his hand, and so was, on at least one occasion present at the address in question.
- After examining the residence, several other sets of fingerprints were found, including a partial set representing a 42% match with the fingerprints of the alleged accomplice, Mauricio Diaz. This evidence is not conclusive, but raises the likelihood that Mr. Diaz was present at the alleged break-in.
